## ABSTRACT

shift control system for a V-belt type continuously variable transmission is provided. The shift control system comprises a controller programmed store an actual transmission ratio of the 5 continuously variable transmission at stop associated vehicle drive source, and inhibit, restart of the vehicle drive source, an initializing operation for returning an operational position of the shift actuator to a standard position when the actual 10 transmission ratio is more on a high-speed side than a predetermined transmission ratio. A shift control method is also provided.
